

## **Findings of potentially allelopathic winter wheat varieties:**

- CJ
- Bullet
- Doans
- Doublestop CL+
- LCS Mint
- OK Bullet
- OK Rising
- Pete WB Grainfield

## **Wheat varieties tested in field that do not seem to have allelopathic effect:**

- Armour
- Centerfield
- Deliver
- Duster
- Endurance
- Ruby Lee
- WB Redhawk

More wheat varieties will be tested in the future and this list will continue to be updated.

It has to be stressed, winter wheat varieties on the allelopathic list do not make them bad varieties or wheat varieties you should not grow. Just have the knowledge of how they may impact the future crop and manage the wheat varieties differently if the next crop is winter canola.
